

# Making Manufacturing-X international

Why – What – How – Who

Vienna, September 13th, 2024

Thomas Hahn, Dr. Dominik Rohrmus, Siemens and LNI 4.0

## Why?

# Challenges and Opportunities for Global Manufacturing Industries

In light of increasing **digitalization** and the resulting requirements, manufacturing throughout the world is facing **unprecedented challenges** and **opportunities**. The **real and virtual world** will continue to **coalesce**. The **entire value chain** will be **integrated and supported by digitalization**, from product, production and process design to onsite customer service and circularity – across locations as well as company and national boundaries.

Deployment needs customization across an infrastructure continuum from cloud to edge, depending on the applications.

Information sharing and data-driven collaboration among manufacturing initiatives across the supply network are becoming more relevant for impactful manufacturing data networks.

Harmonized standards facilitate business scale-up of data ecosystems, which are becoming essential.

No country, no initiative, no company can achieve this on its own!

## Why?

## **Challenges and Opportunities for Global Manufacturing Industries**

Internationalization Data sovereignty Security (e.g. Poland, CESMII, etc) Lack of Lack of Lack of Lack of interoperability connectivity skills speed As-a-Service Standards & Regulations

(e.g. EU CRA, EU Data Act, OPC

UA, AAS, ...)

business models

SaaS

### Why?

## **Example from Automotive**

## **Example: Carbon Footprint**

- ~10% of CO2 emissions from industry generated by own factories, ~90% by upstream/downstream supply chain <sup>1)</sup>
- To reduce CO2 emissions, transparency along the entire value chain is necessary

1) depending on production

## **Example: Battery production**

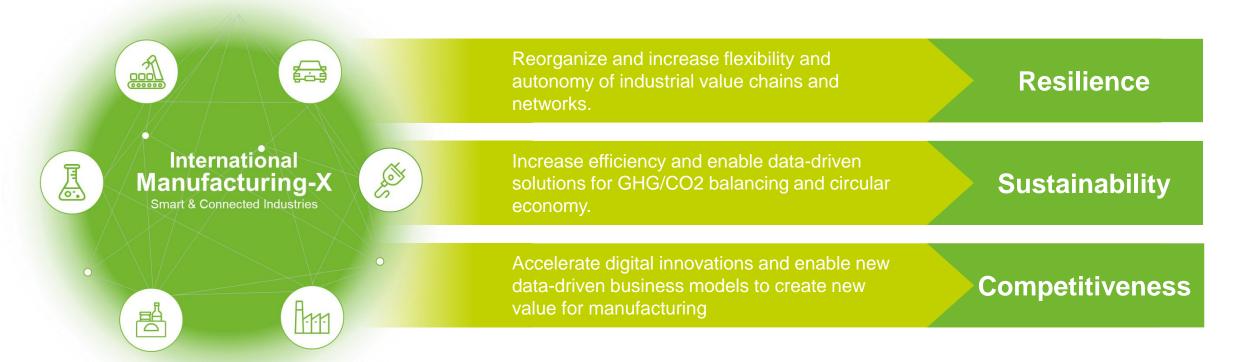

- Only if we use the potential of digitalization we can produce batteries more sustainably
- ~ 96% of the ingredients of a battery are recyclable
- Consistent and transparent use of digital twins along the complete cycle the design and production will be more sustainable

# International Manufacturing-X (IM-X): Make Data Work

IM-X will implement a federated, decentralized and collaborative data ecosystem for smart manufacturing. Open, global and cross-industry, following FAIR Data Principles.

## Foundational Framework for IM-X

A common guideline for IM-X activities and international stakeholders.

#### **Business Models Strategic Goals** International Manufacturing-X enables Resilience Sustainability Competitiveness innovative business models based on a interoperable data-ecosystems International Manufacturing-X develops the foundations for a resilient and competitive industry in a sustainable society. **Digital Products and Services** Everything as a Service **Capabilities Exemplary Cross-**Product Innovation. Supply Chain, Energy & **Industry Use Cases** International Manufacturing-X Collaboration & **Autonomous Factory** Transparency & GHG/CO2 enables development and Management **Product Optimization** resilience deployment of fundamental International Manufacturing-X addresses services driving the federated data cross-industry use cases based on a ecosystem. collaborative use of data with high economic and ecological impact. **Shared Services** Requirements International Manufacturing-X Shared Technological Base Layer **Foundation** builds on a common technical. organizational and legal framework International Manufacturing-X defines and contributes to the future development in cooperation with global standards and runs a basic international law. technical infrastructure to guarantee Regulatory Framework and Standards interoperability and sovereignty.

# Landscape of Initiatives in the Context of global manufacturing

Manufacturing-X is international. Our intention is to trigger international R&D, partnerships, cooperation, standardization and deployment with and for customers globally.

#### **Global Manufacturing Initiatives**

Manufacturing initiatives
Plattform Industrie 4.0, CESMII,
Industry Associations, RRI, ...

Infrastructure initiatives EDC/Eclipse, DATA-EX, IDSA, Gaia-X, ...

Standards and regulations
OPC UA, AAS, ECLASS, ...
PCF reports, Battery Passport, ...

Global smart manufacturing initiatives are building the foundation for the requirements and needs of infrastructure initiatives, and working together to shape standards.

Data and digital infrastructure initiatives have to provide building blocks to fulfill manufacturing needs – from cloud to edge to connected devices.

Standards are essential for scaling-up. Cooperation and influence are essential for IM-X. Regulations are a given. Lobbying is needed.

## International Manufacturing-X Council

Orchestrate and cooperate

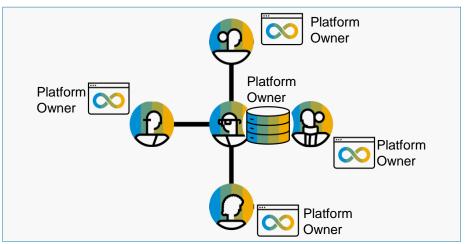

Influence and use

**Define and lobby** 

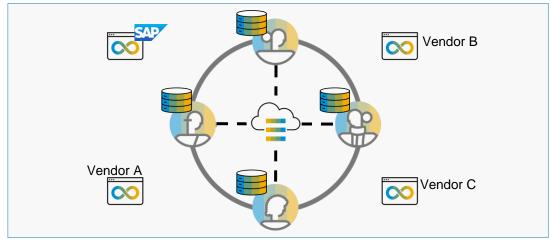

# How it is different from traditional Industry Platforms

#### **Traditional Platform**

**Applications** 

Provided by the platform owner all integrated and aligned

Multiple (competing) solutions from various vendors. Each vendor provides and operates his solution

**Topology** 

Central network service

(Slim) federated operating environment provided by an operating company (joint-venture of multiple companies).

Data exchange decentral / directly between network participants

**Data Persistence** 

Centrally owned by the platform owner

Decentral data persistence – data resides at data owner who can grant access to others

#### Vision

## The Threefold Vision Behind IM-X

1.

Connect value chains and manufacturing data networks across industries and countries.

2

Implement global foundations for data-driven resilient, sovereign and climate-neutral production covering the full life cycle of production and products.

3.

Enable innovative value creation in an interoperable and sovereign data ecosystem.

#### Mission

# The IM-X Mission: Make Data Work at a Global Scale, Across Industries and Stakeholders

IM-X will implement a **federated**, **decentralized** and **collaborative** data ecosystem for smart manufacturing. It aims to enable **open**, **global** and **cross-sector** international operation of **cost-effective** data networks.

This can be realized through 3 main lines of activity:

1.

Facilitate industry use cases on the collaborative use of industrial data for all manufacturing industries. 2.

Develop the requirements, influence international standardization and framework development for basic infra-structure to deploy federated data-ecosystems for manufacturing.

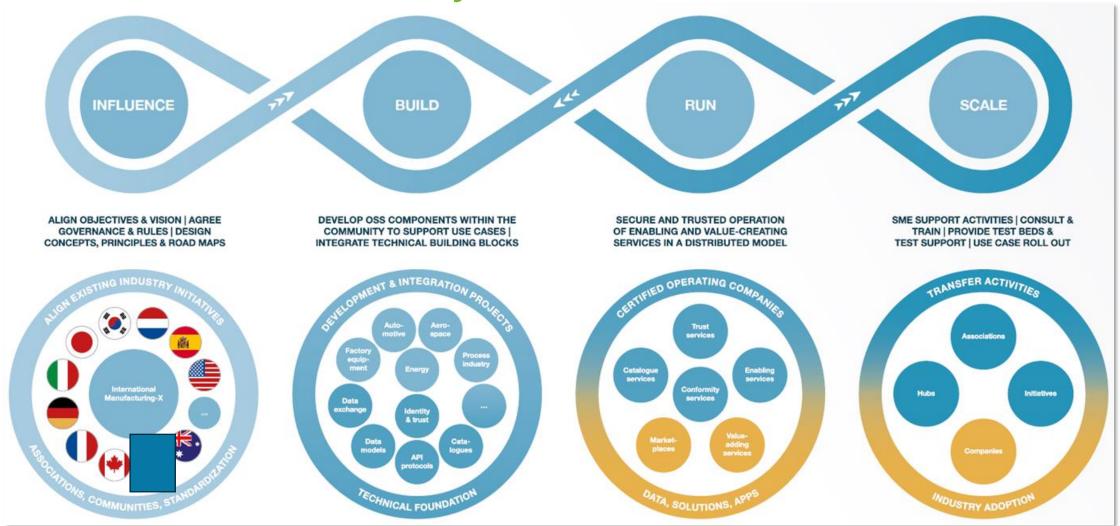

3

Provide guidelines to leverage easy-to-use applications and dynamically scale the ecosystems.

#### How?

# **How Industrial Data Ecosystems work**

How?

# **Establishing the International Manufacturing-X Council**

Open collaboration, inclusiveness, transparency and equal treatment of all the partners inside this international Manufacturing-X ecosystem are key!

The International Manufacturing-X Council will determine collectively what is needed, what to do and who is responsible.

One Country, One Vote

What?

# The IM-X Council: A Co-Design and Unified Effort Driven by an International Ecosystem

- Develop a global joint understanding of data-spaces.
- Connect and cooperate with other initiatives that are relevant to manufacturing (e.g. energy, logistics, mobility, etc.).
- Open exchange of regional initiatives (specific projects, opportunities, etc.).
- Define a joint framework for interoperable IM-X (technology, standards, etc.) that manufacturing product/solution architecture can build upon.
- Drive international harmonization and standardization (consensus based and de-facto based).
- Discussion of use cases and joint projects where appropriate.
- Joint conferences and events.
- ... and other topics

#### Who?

# Initiatives Involved in Establishing the IMX Council INDUSTRIE4.0

## What has happened so far:

2023 October Inauguration Tokio, Japan

**2024** February Kick-off Paris, France

## Germany: domain specific projects

IM-X will implement a federated, decentralized and collaborative data ecosystem for smart manufacturing. Open, global and cross-industry, following FAIR Data Principles.

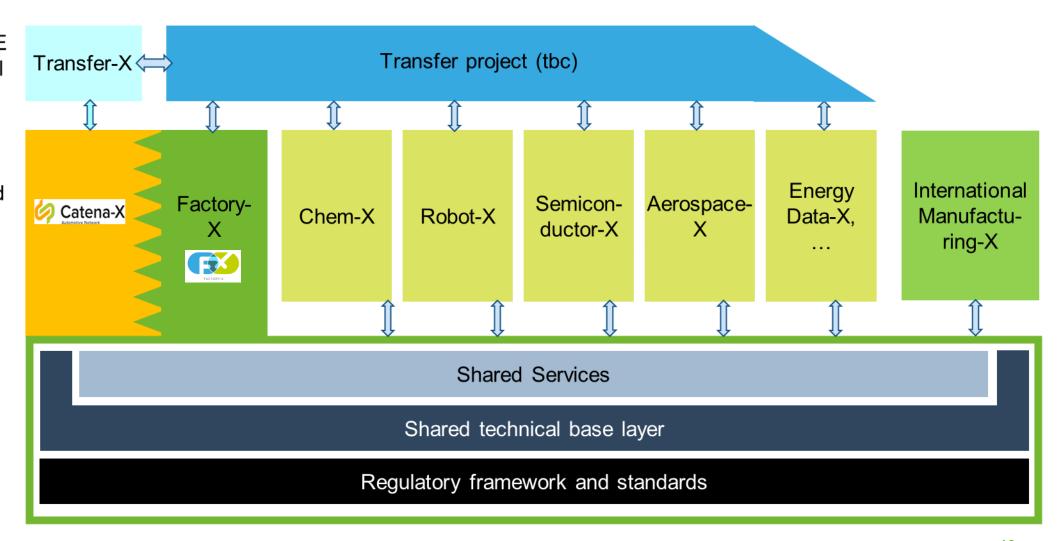

## Germany: cooperation between the projects

Including SME and additional sectors

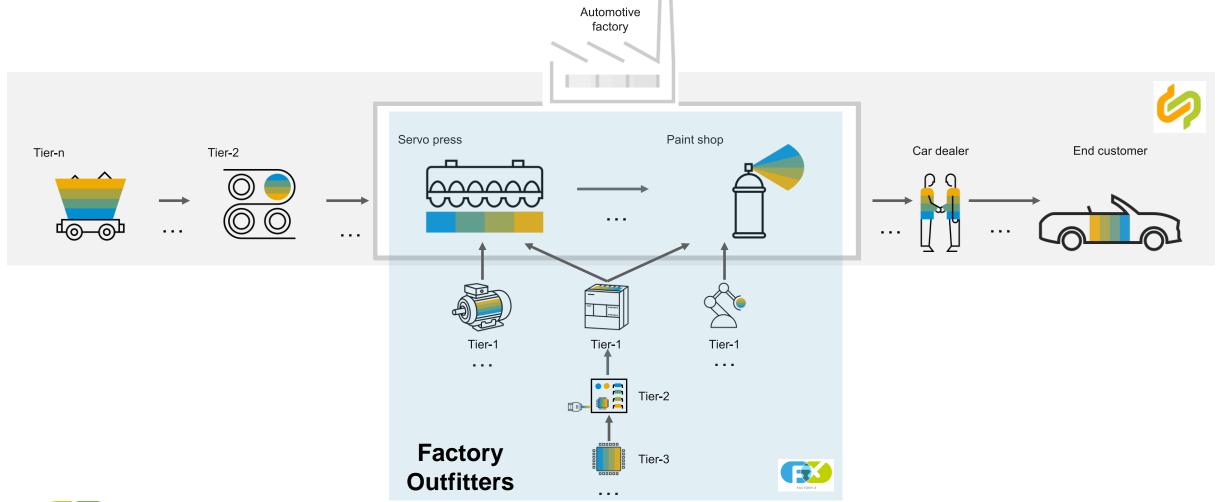

Research and development: Industry Use Cases

Common Base

# **Germany: Catena-X and Factory-X meet**

## **Germany: Factory-X Industry Use Cases**

11 Use Cases für horizontalen- und vertikalen Datenaustausch

Information Update and Change Service

Collaborative Information Logistics

Condition
Monitoring led
Services

Modular
Production

Manufacturing as a
Service – On Demand
Manufacturing

Energy-Consumption and Load
Management

Carbon Footprint Management

Circular Economy

Factory-X Kernel & Basis Services

#### What's next?

## We are driven by business purposes

- WG on data-spaces (influence, build, run, scale)
- WG on DPP, Regulation
- WG overview about projects around the world. Knowledge transfer
- WG on testbed to elaborate jointly technologies (e.g. for DPP, PCF etc.)
- Next events:
  - 2024 October: Japan and Korea public events
  - 2024 November: USA IMX meeting
  - 2025 April: Hannover Fair 2025
